

## Streck launches rapid, modular qPCR instrument

January 2021—Streck has launched its Zulu RT, a rapid, modular qPCR instrument. The instrument consists of four independent thermal modules. A user can operate any combination of modules—one module for a small sample set, leaving other modules for other users, or up to four modules simultaneously for a large sample set. It can perform a 40-cycle, six-channel real-time PCR in less than 20 minutes.
