

TDM linearity and control materials with lithium, 9/13

Audit MicroControls received 510(k) clearance from the FDA, allowing the addition of assayed lithium to Audit's therapeutic drug monitoring daily quality control and calibration verification/linearity kits.

With the addition of lithium, Audit's TDM linearity kit will have five levels and 14 assayed analytes and the control will have three levels and 13 assayed analytes.

This freeze-dried product, when stored at 2°C to 8°C, has a shelf-life of two years and open-vial stability of seven days for linearity and 30 days for the control.
