

[Thermo Fisher launches genotyping workflow](#)

written by CAP TODAY

March 19, 2020

March 2020—Thermo Fisher Scientific launched the Applied Biosystems Axiom Propel Genotyping workflow designed to allow laboratories to scale up easily by eliminating the need for multiple liquid handlers and lower running costs through the use of reusable dispensing cassettes and minimal labware.

Axiom Propel also offers a chemistry and automated analysis workflow allowing genotyping results to be generated in two days. A standalone GeneTitan scanner can be used in combination with the GeneTitan MC instrument for higher priority samples.
