

Thermo Scientific leakproof vials, 10/17

October 2017—Thermo Scientific Samco Clicktainer leakproof vials have been developed to provide sample protection and user safety by enabling correct cap application. The vials are designed for the secure collection and handling of fluid, solid, and powder samples, including urine, sputum, and stool specimens; the lid-lock design makes them ideal for the secure transport of clinical, research, and forensic samples.

The Clicktainer vials are CE marked and compliant with applicable FDA regulations. They also are 95kPa leak and pressure tested in accordance with standards BS EN 14401 and 14254, respectively, and are tested to support their use in hospital pneumatic transport systems.
