

Triple parasite screen, 10/17

October 2017—TechLab received FDA clearance for the Tri-Combo Parasite Screen test. The test is an enzyme immunoassay for the simultaneous qualitative detection of *Giardia* spp., *Cryptosporidium* spp., and/or *E. histolytica* antigen in human fecal specimens. It specifically detects pathogenic *E. histolytica* and does not cross-react with nonpathogenic *E. dispar*.
