

Validate kits for Roche Cobas, Siemens Sysmex

October 2018—LGC Maine Standards announced the release of its Validate hsTnT kit for Roche Cobas. The kit, in a human serum matrix, is a linearity and calibration verification product that targets Roche's Troponin T Gen 5 Stat (TnTG5) assay range. The company also released its Validate Heparin linearity and calibration verification kit for Siemens Sysmex CS analyzers. The kit, also in a human plasma matrix, evaluates heparin anti-Xa. Validate kits are liquid, ready to use, and offer five concentrations covering the reportable range.
