June 2023—Verichem Laboratories offers multilevel calibration verification materials for cholinesterase activity as part of its liquid-stable and ready-to-use Enzyme ER Verifier kit. The verifiers are designed to include at least one concentration level of enzyme activity within the normal range and intended to be treated as patient specimens. The material's protein balance, pH, and ion content are constant across concentration levels. The kit material also contains multilevel assigned activities for alanine aminotransferase, alkaline phosphatase, alpha-amylase, aspartate aminotransferase, creatine phosphokinase, gamma-glutamyl transferase, lactate dehydrogenase, and lipase. Each kit has 5 mL of material for each of the six levels and a shelf-life and open-vial stability of 18 months.
