

Verichem Matrix Plus chemistry reference materials

April 2023—Verichem Laboratories liquid-stable Matrix Plus chemistry reference materials for the calibration verification of wet chemistry assays are now available. The multilevel kit, along with an optional and standalone level F, supports overall system quality control and CLIA compliance. The six-level set of materials contains seven individual chemistry analyte components covering 48 separate and individual concentration levels.

Matrix Plus chemistry reference materials incorporate a buffered protein-based matrix for serum-like reactivity and are intended to be treated as a patient specimen. Open-vial stability is 21 months from the manufacturing date.
