

Verichem reference materials for creatinine assays

March 2024—The Matrix Plus chemistry reference kit and standalone, ultra-high Matrix Plus level F for the calibration verification testing of creatinine assays by enzymatic and colorimetric methods are available from Verichem Laboratories. The ready-to-use reference materials offer constant protein content and pH across all concentration levels. The five-level Matrix Plus kit and level F feature a creatinine range from 0.2 mg/dL to 30.0 mg/dL and are intended to be treated as patient specimens. Shelf life and open-vial stability are 21 months from the manufacturing date.
