

Verichem reference materials for electrolyte testing

September 2023—Verichem Laboratories offers a line of liquid-stable, multianalyte kits for the calibration verification of electrolyte assays for use with systems employing flame photometer, direct or indirect ion-selective electrode, or standard enzymatic/colorimetric testing methods. The Electrolyte Standard kit contains the analytes chloride, ionized calcium, lithium, potassium, and sodium and has a 21-month stability claim. The ISE Standard kit contains chloride, lithium, potassium, and sodium and has an 18-month stability claim. The Carbon Dioxide Standard kit and standalone CO2 Standard level F both have 15-month stability claims. All products are free of azides, glycols, surfactants, and other potentially interfering substances.
