

## Vitamin D assay, 8/13:87

Immunodiagnostic Systems has received FDA clearance for its 1,25-dihydroxy vitamin D assay for use on the IDS-iSys system.

The vitamin D test is used to measure 1,25-dihydroxy vitamin D deficiency, which is associated with renal disease and used in the diagnosis of disorders in the metabolism of 25-hydroxyvitamin D and phosphate.

The IDS-iSys 1,25-dihydroxy vitamin D kit is a complete test system with the immunocapsule extraction and automated chemiluminescence immunoassay. This enables the quantitative determination of 1,25-dihydroxy vitamin D in human serum and plasma in a single working day.
