

Vitamin D test, 2/13:113

written by CAP TODAY
February 28, 2013

Diazyme Laboratories has received FDA 510(k) clearance to market its new 25-hydroxy vitamin D assay, which measures total true 25-hydroxy vitamin D levels in serum and plasma samples. The assay automates the removal of nonspecific protein binding and cross-reactivity that may occur in competing assays, thereby ensuring results will be precise and accurate.

The vitamin D assay is fast and flexible, with complete testing results available in under two hours. The test can be used manually or adapted for use on a range of fully automated microtiter plate readers.
