

Whole-slide imaging application for AP QA, 4/13:85

QualityStar will present at the Cambridge Healthtech Institute's Ninth Annual Biomarkers and Diagnostics World Congress a new application that uses whole-slide digital imaging (WSI) for anatomic pathology external peer review quality assurance. The presentation will review current quality assurance programs and the application of WSI as an approach to gain longitudinal benchmarking data for quality review.

Health care institutions, pathologists, and payers will find the information provided valuable for reviewing their quality programs and continuous improvement initiatives to reduce error in cancer diagnoses.

The meeting takes place May 6 to May 8 in Philadelphia.
