

ZeptoMetrix launches NATtrol MS2 bacteriophage stock

Nov. 10, 2022—[ZeptoMetrix](#) launched its NATtrol MS2 Bacteriophage quantitative stock, intended for use as an internal process control for rt-PCR assays.

Bacteriophage MS2 is a virus that infects *Escherichia coli* and other members of the Enterobacteria family. NATtrol inactivation of MS2 results in a refrigerator-stable, whole organism stock solution, the company says, which shows increased reproducibility and lot-to-lot consistency over live MS2. The product is for research use only.
